JESSE EGAN

Front-End Developer | Interactive Designer

LAUGHLIN CONSTABLE
Front-end Developer | Jan 2013 to Present
Currently at Laughlin Constable, I work with a large team of Front-end & Back-end developers to build organized and powerful commercial websites. My largest collaboration began with the redesign of Bridgestone's "Firestone Complete Auto Care" website. Using Subversion control, our team of developers were able to contribute source code without conflicts. Building mobile/tablet friendly websites using a HTML5 boilerplate is what we did best as Front-end developers.

NOISE
Interactive Programmer & Designer | Oct 2011 to Jan 2013
During my time at NOISE, I worked intensely with a group of designers to rebuild and redesign large Visitor Bureau websites including new client development from the ground-up. As the Interactive department lead, my focus began with campaign objectives and web-best practices including SEO, mobile/tablet development, and the merge of Flash to HTML5. Followed by various CMS integration, problem solving, and client interaction. I also drank a lot of coffee.

CREATONOMY
Interactive Engineer | Feb 2009 to Oct 2011
Creatonomy is an advertising and marketing communications agency located in Milwaukee, WI. Originally an intern, my hire led me to time-based media projects in senior marketing and health care. The largest impact I had at Creatonomy was the site redesign from ground up, which won an award from BestFlashAnimationSite.com.

EDUCATION
University of Wisconsin-Milwaukee | BFA - Digital Studio Practice - Web Design & Animation
As part of the cross-disciplinary program at Milwaukee, my focus included web development, 2D & 3D animation, video & audio production, and graphic design. During my time in Milwaukee I participated in a number of art exhibitions including a performance at the Milwaukee Art Museum.

Languages I speak:	Software I'm fluent in:	CMS knowledge:
HTML5	Sublime Text 2	Wordpress
CSS3	TortoiseSVN/GIT	ExpressionEngine
Javascript	MAMP/XAMP	Drupal
jQuery	Xcode/Coda	Sitecore
PHP & MySQL	Visual Studio	Cushy
.NET	Handbrake	Magento
Actionscript 2 & 3	MPEG Streamclip	
XML	Adobe Production Suite	
	Final Cut Pro	
	Max MSP	
	Maya	

HTML5 Boilerplate, Firebug, UA Spoofer, YSlow, ImageAlpha & ImageOptim, CSSLint, CSS Pie, Emmet for ST2
  - Things a developer shouldn't live without.
